Carpet Selection and the standard decoration style, the principle of unity [cotton polyester blanket](#)

Any of a project, [micro raschel blanket](#) whether new construction, renovation or refurbishment of the old works are planned, [China blanket supplier](#) standard. Is based on five-star standard decoration or a Samsung standard; is a Western-style or Chinese style; is a genre of classical or modern schools, all this is that you choose what type, grade, color, pattern carpet reference point, and only adhere to the standard style of decoration with the selection of carpet unity, in order to make your project perfect, to achieve the purpose of icing on the cake.

The principle of sub-regional selection of carpet

A complete hotel project is composed by a number of different regions, there are guest rooms, corridors, elevator hall, large and small restaurants, large conference rooms, reception room, as well as office space, entertainment areas, etc.. As the different functions of these areas, also contributed to pedestrian flow, traffic flow ranges. Is the static is the trouble, is cold is a warm, in order to adapt to the particularity of the region, the regional selection of carpet to be echoed with, which is adaptability.

Carpet selection and the principle of adapting the external environment

Your hotel, guesthouse lies in what kind of external environment, and for your great selection of carpet binding. The average annual rainfall, average temperature, outdoor relative humidity, humidity, air quality, health green factors are taken into account and not take these factors into account, will give the carpet in

of ice and snow into a hotel that is melted to the corridor, room carpet caused by heavy pollution. Is a major coal-producing Shanxi province, small and even the naked eye can not see the dust, together with the shoes of those who entered into the hotel, right carpet cleaning difficult. Thus, in particular, when the external environment should give more consideration to the unity of the carpet type and the environment.

Carpet selection and project budget consistent with the principles of

First, it should not affect the selection of carpet due to budget level, but can be adjusted. A mechanism different from the carpet manufacturing process and raw materials due to the different ratio and price vary, so as not to reduce the carpet match the budget level also provide a lot of choice. 80% in the same room carpet wool production process due to different, Axminster, Wilton, wool tufting price difference is obvious. The use of 50% wool, 50% of the fiber blends (nylon fiber, inter alia, polyester, acrylic and other synthetic wool prices lower than those in the price), can guarantee the quality of the carpet and practical, but also eliminate static electricity, wool and chemical fiber strengths and weaknesses complement each other, but also reduce the cost. It may also be by reducing the thickness of the carpet to reduce the pile head weight to lower the price. In short should be selected without reducing the carpet category, under the principle of hierarchy, in the same grade, in the same category of a species within the carpet, with the proportion of wool, velvet head weight adjustments, in order to carpet-quality project estimates with unity.

Carpet shop around adhere to the principle of selection of Whether imported or domestically produced carpets carpets, equipment manufacturers owing to the different choice of different raw materials, processing technology and management level, the difference between high and low, etc., resulting in the final product, variety, quality, color, price and services vary. Through the choice of product manufacturers can use the sample comparison, information analysis, enterprises and other ways to complete the investigation so as to achieve the best selection of carpet and access to services to better purpose.
